

Task-3

Data Scientist Roles & Responsibilities

1) Data collection & analysis:

* Data collection which means gathering data which are relevant to the field in different sources. after we need to clean and preprocess it and analyze the pattern and trends using EDA.

2) Machine learning & predictive Modelling:

* Develop an model according to the need and fine-tuning it to create more accuracy which will help to have more accurate prediction and Decision Making.

3) Data visualization & Communication to Business partners:

Creating dashboard, reports visualization and presenting insights effectively to make user understand about the data. also having effective communication about the Business can be a strategy.
