

## Day 2 - Task 2

AI is a combination of ML and DL which has the ability of Machine to imitate Human behaviour.

ML is a subset of AI which is an AI algorithm allows system to learn Data.

DL is ML algorithm that uses deep Neural Network to analyse Data.

quick understanding:

AI  $\Rightarrow$  The entire car  $\rightarrow$  which make decision

ML  $\rightarrow$  The engine  $\rightarrow$  Helps to start the process.

DL  $\rightarrow$  Turbo engine  $\rightarrow$  More powerful version of ML
